# World Horticultural Trade and U.S. Export Opportunities

## U.S. Horticultural Trade Surplus With Canada Narrows In The Face Of Continued Strong U.S. Dollar

Source: U.S. Bureau of the Census and  
Classic Currency Converter

U.S. exports of horticultural products to Canada continued their steady upward trend in 2000, reaching a record \$3.3 billion. On the other hand, U.S. imports of Canadian horticultural products totaled a record \$2 billion in 2000. The bulk of U.S. horticultural exports to Canada consists of fresh fruits and vegetables. U.S. shipments of fresh produce to Canada totaled \$1.5 billion in 2000, up 7 percent from exports the preceding year. Lettuce, table grapes, apples, and potatoes are some of the major produce exports to Canada. In contrast to the modest growth in exports, U.S. imports of horticultural products from Canada have increased sharply. Processed fruits and vegetables account for about 30 percent the value of total U.S. horticultural product imports from Canada. Imports of frozen vegetables, the main processed horticultural product imported, were valued at a record \$413 million in 2000. Trade in frozen potatoes accounts for almost three quarters of total U.S. imports of frozen vegetables from Canada. U.S. imports of Canadian processed vegetables, mainly canned, have increased, as well, to about \$70 million in 2000. While the United States continues to run a horticultural trade surplus with Canada, the surplus has been declining steadily since 1997, partially explained by a stronger U.S. dollar against the Canadian dollar.

## **Export Summary**

### **March 2001**

U.S. exports of horticultural products to all countries in March totaled \$954 million, an increase of 8 percent from the same month a year earlier. Categories with the most significant increases in March were fresh fruit (up 36 percent to \$208 million), processed fruit (up 11 percent to \$56 million), essential oils (up 7 percent to \$63 million), tree nuts (up 7 percent to \$66 million), and wine and beer (up 6 percent to \$61 million). The only category that declined was fruit and vegetable juices (down 11 percent to \$65 million).

March exports to Canada, the largest market, were up 4 percent from March 2000, to \$289 million. Exports to Japan and the European Union (EU) were up 2 and 8 percent, respectively to \$168 million and \$165 million. Exports to Mexico rose 15 percent to \$78 million. Exports to Malaysia showed the most

dramatic jump for March 2001, up 185 percent from March 2000, to \$14 million, while exports to China rose 71 percent to \$13 million. Exports to Korea rose 18 percent, to \$41 million and exports to Hong Kong and Taiwan rose to \$30 million and \$26 million, respectively.

Exports for the October-March 2000/01 period were up 8 percent from the same period in 1999/2000 to \$5.6 billion. Tree nut exports are up 23 percent to \$675 million for the October-March 2000/01 period, while fresh fruit exports are up 17 percent to \$1 billion, and fresh vegetable exports are up 11 percent to \$636 million. The fastest growing markets for FY 2001 to date are: China, up 101 percent; Malaysia, up 66 percent; Taiwan, up 22 percent; the Philippines, up 20 percent; Hong Kong, up 18 percent; Mexico, up 14 percent; and the EU, up 11 percent. Exports to Japan are down 1 percent for the October-March 2000/01 period compared with the same period last year.

---

### **New U.S. Trade Internet System**

The public now has unlimited access to the most up-to-date data on U.S. exports and imports of agricultural, fishery, and forestry products. The U.S. Trade Internet System allows users the flexibility to customize their data searches and save their criteria for repeated use. Users can obtain value or volume data for selected harmonized codes or commodity groupings to track trends going back to 1989.

To view the site go to <http://www.fas.usda.gov/ustrade/>

For more information on the U.S. Trade Internet System, e-mail [usthelp@fas.usda.gov](mailto:usthelp@fas.usda.gov)

To access **FAS Attache Reports** on line, please go to the following Internet address:

[Http:// www.fas.usda.gov/scripts/attachrep/default.asp](http://www.fas.usda.gov/scripts/attachrep/default.asp)

Search through the country and market reports prepared by FAS attaches covering over 20 horticultural and tropical product commodities and nearly 130 countries.

### **What's New on the Homepage?**

The Horticultural and Tropical Products Division has introduced a feature on its homepage designed to bring the latest information to the public as efficiently as possible. The site contains information on policy and technical developments affecting trade in horticultural commodities, selected reports submitted by FAS overseas offices, and special reports. For further information, please contact Nancy Hirschhorn (202)720-2974. Go to <http://www.fas.usda.gov/http/>.

## Outlook for Concentrated Apple Juice Production and Trade in Selected Countries

Production of apple juice (AJ) in selected countries in 2000/01 is estimated at nearly 650,000 metric tons (70/71 degrees brix equivalent), 12 percent above the previous season's output. The upturn mainly reflects increased AJ production in some major producing countries, such as Germany, Argentina, and Chile. AJ production in the United States, the world's largest producer, in 2000/01 is estimated to decrease 5 percent to 145,000 tons. Exports of AJ from selected countries in 2000/01 are estimated at about 460,000 tons, 10 percent more than last season, due to larger exportable supplies from Germany, Italy, Argentina, and Chile. U.S. AJ exports in 2000/01, on the other hand, are anticipated to decrease to their lowest level ever, 5,000 tons. Lower domestic production, combined with increased exportable supplies from main world shippers are expected to hamper U.S. AJ exports this season. U.S. AJ imports in 2000/01 are expected to decrease slightly to 220,000 tons.

### Northern Hemisphere

#### United States

U.S. AJ *production* in 2000/01 is estimated at 145,000 tons, down 5 percent from 1999/2000. Lower apple production in some of the major eastern apple processing states, such as New York, Michigan, Pennsylvania, and Virginia has hampered overall U.S. AJ production in 2000/01. A large proportion of U.S. apples produced in eastern states are for the processing sector, while apples from the West go mainly to the fresh domestic and export markets. Processing of apples in 2000/01 is expected to decrease 18 percent in New York, 29 percent in Michigan, 11 percent in Pennsylvania, and 2 percent in Virginia. Normally, about 35 percent of New York's apples for processing are diverted to the juice and cider industries compared with 40 percent in Michigan and 25 percent in Pennsylvania.

U.S. AJ *imports* in 2000/01 are estimated at 220,000 tons, down 2 percent from last season, based on lower imports to date. AJ imports into the United States, which are mostly concentrated non-frozen, totaled around 136,000 tons, 70/71 degrees brix equivalent, for the period July 2000 through February 2001, down 2 percent from the same period last season. The decrease mainly reflects lower imports from Argentina and Chile, which are running 52 percent and 43 percent behind the same period last season, respectively. On the other hand, AJ imports from China increased 99 percent during the same period to 20,000 tons. The increased demand for the Chinese product has raised the U.S. industry's concern about China's AJ marketing strategy in the United States and revived the dumping case against lowered-priced Chinese juice. On May 15, 2000, the U.S. International Trade Commission (ITC) issued a final determination that the U.S. apple juice industry had been materially injured by imports of "non-frozen" apple juice concentrate from China. In April 2001, the U.S. apple industry requested that the U.S.

Department of Commerce extend antidumping duties on imports of Chinese apple-juice concentrate to include the so-called “frozen concentrate.” Discussions on the issue are ongoing.

## Major Suppliers' Market Share of U.S. Apple Juice Imports

U.S. Source: U.S. Department of Commerce, Bureau of the Census

S .  
exp

Imports in 2000/01 are expected to decrease to their lowest level ever, 5,000 tons. However, U.S. AJ exports to Japan, Canada, and Venezuela, major buyers of the U.S. product, are expected to continue strong in 2000/01.

## Poland

Poland's AJ production in 2000/01 is expected to decrease for the third consecutive season to 50,000 tons, 40 percent below the 1999/2000 output. Another reduced apple crop has continued to tighten supplies of processing apples and, as such, the production of AJ this season. In Poland, around 60 percent of the apple crop is processed, while most of the rest is directed to the fresh domestic market. Processed apple products include concentrated juice, fruit beverage, wine, and jam. Poland is a unique international supplier of AJ, that sales high-acid juice.

Almost 90 percent of Poland's AJ production is exported annually to neighboring countries. Poland's AJ exports in 2000/01 are estimated at 65,000, 13 percent below 1999/2000 shipments. The decrease mainly reflects lower AJ production and tight available stocks. On the other hand, export prices for Polish AJ are estimated to improve somewhat this season, due to reduced supplies of high-acid AJ in world markets.

Germany is by far the leading customer, normally accounting for more than 80 percent of total Polish AJ exports.

## **Southern Hemisphere**

### **Argentina**

Argentina's 2000/01 AJ production is estimated to bounce back to nearly 93,000 tons, up sharply from the 1999/2000 reduced output. More apples are expected to be processed this season, reflecting a much larger fresh crop. Traditionally, apples not suitable for the fresh domestic and export markets are processed. An estimated 80 percent of Argentina's processed apples go to AJ production, 15 percent are used for cider, and 5 percent are dried or processed into jams, vinegar, and other products. Argentina is the leading AJ producer and exporter in the Southern Hemisphere.

Exports of AJ from Argentina in 2000/01 are estimated at 83,000 tons, more than 80 percent above last season, due mainly to more exportable supplies. The United States continues to be Argentina's major AJ market. U.S. imports of AJ from Argentina in 1999/2000 totaled nearly 63,000 tons (70/71 degrees brix equivalent), valued at \$66 million. However, U.S. imports of Argentina's AJ during the period of July 2000 through February 2001 are more than 50 percent behind the same period last season. Increased supplies and imports from China seem to be hampering shipments of Argentina's AJ to the United States so far this year.

### **Chile**

Chile's AJ production in 2000/01 is estimated at 42,000 tons, up more than 20 percent from the 1999/2000 output, mainly the result of a larger apple crop and increased processing. There are six juice processing plants in Chile with excess production capacity. Traditionally, apples not suitable for the fresh export market, are processed into apple juice. But as the processing market has become increasingly saturated, industry buyers have started to pay increased attention to the quality of the product. As a result, Argentina's AJ industry is both encouraging farmers to increase production of existing orchards of sour-type apples, as well as to expand planting of new apple varieties.

In Chile, AJ production is mainly directed to the export market. Chile's AJ exports in 2000/01 are estimated at 42,000 tons, nearly a quarter more than shipments in 1999/2000. The United States is Chile's largest AJ customer, accounting for more than 70 percent of total export sales. In 1999/2000, Chile was the second largest supplier of AJ to the U.S. market, with sales of more than 42,000 tons, valued at \$47 million. But the importance of other markets, such as Japan, Canada, and Australia is increasing. Only small amounts of AJ are consumed domestically, principally single-strength type.

*(The FAS Attache Report search engine contains reports on the apple juice industry for more than 10 countries, including Argentina, Chile, and Germany. For further information on supply, distribution, and trade, contact Samuel Rosa at (202) 720-6086)*

The concentrated non-frozen category (HS 2009.70.0020) accounted for 96 percent, 94 percent, and 98 percent of total U.S. apple juice imports in 1997/98, 1998/99, and 1999/00, respectively.

## U.S./Canadian Horticultural Trade: An Update

Horticultural trade between the United States and Canada was among the agricultural sectors that experienced the most growth in the run-up to and entering into force of the North America Free Trade Agreement (NAFTA). Trade in horticultural products between the two countries continues to expand as a result of new market opportunities, which are benefitting their fruit and vegetable industries. U.S. horticultural product imports from Canada were valued at more than \$2 billion in 2000, about three times the value imported prior to the implementation of NAFTA in 1994. Canada's imports of U.S. horticultural products were valued at about \$3 billion in 2000. The balance of horticultural trade between the two countries has continued to favor the United States.

### *Canadian Imports*

#### Canada's Imports from the United States Continue to Grow Despite Rising Costs

Canada's imports of U.S. horticultural products increased 5 percent from 1999 to 2000, recovering from a slight dip in 1999. Since 1990, horticultural imports from the United States increased nearly 30 percent. Fresh fruits, fresh vegetables, and tree nuts increased 5 percent, 46 percent, and 40 percent, respectively, since 1990.

This growth occurred despite a depreciation of the Canadian dollar against the U.S. dollar. The Canadian dollar fell 27 percent against the U.S. dollar from 1990 to 2000 making U.S. imports much more expensive for Canadians.

#### **Canada's Imports of Fresh Produce from the United States**

Source: World Trade Atlas

In the case of fresh fruits and tree nuts, the depreciation of the Canadian dollar combined with an increase in U.S. producer prices resulted in higher prices of imported U.S. fruits. As a result of this increase, Canada's consumption of U.S. fruits remained flat for much of the decade.

While U.S. producer prices for fruits and nuts finished the decade 23 percent higher than in 1990, the U.S. producer prices for vegetables fell by 25 percent over the same period. The fall in U.S. vegetable prices was offset by the depreciation of the Canadian dollar, resulting in a slight increase in adjusted vegetable producer prices.

Canadian consumers reacted favorably to the slow increase in the price of U.S. vegetables, purchasing 46 percent more vegetables from the United States in 2000 than they did in 1990.

### Value Growth of Fresh Fruit and Nut Imports from the U.S. and Change in U.S. Producer Prices in Canadian Dollars Since 1990-92

## Canada's Vegetable Imports from the United States

### Value Growth of Fresh Vegetable Imports from the U.S. and Change in U.S. Producer Prices in Canadian Dollars Since 1990-92

## **Canada's Horticultural Imports from the United States Keep Pace With Imports from Other Suppliers**

Canada's imports from the United States grew at roughly the same rate as Canada's imports from the rest of the world; at 38 percent and 41 percent, respectively. This average growth across all horticultural products conceals the

decline in some specific commodity groups. The growth of imports of fresh fruit from the United States lagged that of other competitors by 72 percent, mainly due to a fall in Canada's imports of U.S. fresh citrus. Nursery products imports from the United States also suffered a relative decline. The dramatic growth in wine imports from the United States compensated for these losses.

Canada's imports of U.S. wine jumped from \$25 million in 1990 to \$90 million in 2000.

Imports valued in US dollars

Source: World Trade Atlas

## **Canada's Imports of U.S. Fresh Table Grapes Continue to Fall**

Canada's imports of U.S. fresh table grapes continued to fall in 2000, due to increased competition from major suppliers. The value of Canada's table grape imports from the United States peaked in 1991 at \$117 million and fell throughout the 1990s reaching a low of \$95 million in 1998 before climbing back to \$106 million in 2000. Total Canadian imports of fresh table grapes increased almost 10 percent during the 1990's, while the U.S. share of table grape import volume fell from 71 percent in 1993 to 60 percent in 2000. The primary competitor in imported fresh table grapes during this period was Chile. The counter-seasonal pattern of Chilean table grape production means that Canadian consumers are now enjoying grapes year-round. The import pattern complements U.S. table grape marketing in Canada. Chile's volume share of Canada's table grape imports reached 22 percent in 2000. Chilean and Mexican table

grapes increased their share of the Canadian market, during the U.S. off-season. In 2000, the price of imported U.S. table grapes was \$1.12 per kilogram as compared to the average of \$1.29 per kilogram for all imported table grapes. The prices of Chilean and Mexican table grapes were \$1.69 and \$1.28 per kilogram, respectively.

### Canada's Import of Fresh Tomatoes Volume Imported in 2000 172,707 Metric Tons

#### Canada's Imports of U.S. Fresh Tomatoes Continue to Grow

The United States is the largest supplier of fresh tomatoes to Canada, which purchased almost 80 percent of total U.S. tomato exports in 2000. Canada's imports of fresh tomatoes from the United States grew 43 percent from \$76 million in 1990 to \$110 million in 2000. This

Source: World Trade Atlas

absolute growth allowed the United States to gain an 82-percent share of all fresh tomato imports into Canada. Florida, California, Arizona, Virginia, and Texas led all other states in exports of tomatoes to Canada, accounting for more than 90 percent of the total. In 1999, according to attaché reports, Florida exported 72,182 tons of tomatoes to Canada, valued at \$49 million. Moreover, tomato exports account for 14 percent of the value of Florida agricultural exports to Canada. Competition in the Canadian fresh tomato import market comes mostly from Mexico, which captured a 14-percent market share in 2000.

### **Canada's Stagnant Import Market for Fresh Oranges**

Canada's market for imported fresh oranges was relatively constant during the 1990s at \$100 million dollars or 200,000 tons. During much of the decade the United States supplied over 85 percent of Canada's imported oranges. Canada's dependence on U.S. oranges makes the Canadian market vulnerable to citrus production shocks in the United States. In the winter of 1998-99, for example, an unseasonable freeze in California wiped out almost half of the state's

orange crop, creating market opportunities for competitors, such as South Africa. While imported oranges from South Africa fell from their 1999 levels, South African exporters who established contacts with Canada's food industry will continue to play a strong role in Canada's orange market for years to come.

### ***U.S. Imports***

### **Processed Fruits and Vegetables Lead U.S. Imports of Horticultural Products from Canada**

Among the horticultural sectors, processed fruits and vegetables account for about 30 percent of the value of total U.S. horticultural product imports from Canada. Moreover, imports of frozen vegetables, the main processed horticultural product imported from Canada, have tripled since 1994. Total U.S. imports of Canadian frozen vegetables were valued at more than \$400 million in 2000.

Likewise, U.S. imports of canned vegetables from Canada were valued at about \$75 million in 2000, seven times the value imported in 1994. Canada, Mexico, and Brazil supply most of the U.S. demand for imported processed fruits and vegetables.

### **Potato and Potato Products are also an Important Component**

U.S. imports of Canadian potatoes and potato products have increase steadily since 1994, reaching a record \$405 million in 2000. However, bilateral trade in potatoes and potato products between the United States and Canada continues to be marked by several sensitive issues. Most U.S. potato imports from Canada are destined for the northeastern region for fresh table use. Trade in frozen and processed potatoes, however, has grown faster than trade in fresh potatoes. U.S. per capita consumption of table potatoes has declined, whereas per capita consumption of frozen french fries has increased.

## **Canned Deciduous Fruit Situation in Selected Countries**

**Production of canned peaches in selected countries for 2000/2001 is estimated at 1.2 million tons, up 11 percent from the revised estimate of 1.1 million produced in 1999/2000. Exports for 2000/2001 are estimated at 561,379 tons, up 9 percent from the preceding year. Canned pear production for 2000/2001 is forecast at a low 127,983 tons, down 2 percent from the previous year. Exports of canned pears for 2000/2001 are estimated at 85,700 tons, down 11 percent from last year's level.**

### **Regional and Country Highlights**

The canned deciduous fruit sector is suffering a market crisis throughout the world due principally to an over production of canned peaches, low prices, and increased competition among the principal exporters: Greece, South Africa and Australia.

#### **Greece**

Favorable weather conditions in Calendar Year (CY)2000 resulted in increased output, compared to the 1999. However, due to the relatively large stocks on hand from the previous season and lower prices on the international market, total canned peaches output in 2000 was 44,000 tons lower than the quantity processed in 1999. Exports of canned peaches during CY2000 totaled 400,000 tons, a 19 percent increase relative to 1999 exports. Peach withdrawals in 2000 totaled 204,000 tons, a slight increase over the 1999 level.

The weather conditions through June 2000 were about normal, but fruit size was relatively small because of a heavy set. This combined with very high July temperatures resulted in early varieties ripening a week earlier than expected. Consequently, fruit size was small and fruit was either left on the tree or taken to the withdrawal pools. Later varieties had generally good quality fruit. Despite large beginning stocks (102,000 tons versus 5,506 tons in the previous year), and low prices. Estimated canned output jumped from the fall forecast of 320,000 tons to an estimated 397,000 tons. A preliminary forecast for the 2001 crop is 385,000 tons of canned product.

As of this year, the European Union (EU) price support is granted directly to growers for peaches to be canned. This direct subsidy is set at 47.70 Euro per metric ton. At the present rate of exchange (340.75 drachmas per 1 Euro) the actual grower support price is 16,254 drs/kg. A prerequisite for this payment is a signed contract with a processor. According to peach sector contacts, the processors signed one year contracts with the growers prior to the beginning of the marketing year. The price is negotiated annually and does not include the support price. Supplemental contracts may be signed specifically for peaches,

not later than August 15. The EU announces the support price for peaches every year by April 30.

Prices for a Good Standard 24/1 kg case ranged from U.S.\$ 7.80 - \$8.30.50 August- September and by January-February 2001 were quoted at \$9.20 - \$9.60.

According to EU regulations, the maximum allowable withdrawal quantity of peaches within the EU countries was not to exceed 40 percent of the total marketed tonnage in 1999/2000 and this was further reduced to 30 percent for the 2000/01 season (approximately 204,000 tons).

### **Italy**

Italian canned peach, pear and mixed fruit output for 1999/2000 are estimated at 26,500,tons, 36,000 tons and 65,000 tons respectively. Although growing conditions are favorable so far this year, the output of canned peaches is forecast to decline further because processors prefer to import Greek peaches in bulk and can them under their own labels. The arrangement allows Italian canners to benefit in the export market by using lower cost Greek product in their mixed fruit line. It also provides the canners with leverage to negotiate a lower price from domestic processors.

### **South Africa (SA)**

The long awaited EU/SA free trade accord came into force provisionally on January 1, 2000. Under the agreement, EU imports of South African canned fruit are subject to tariff quotas; 40,000 tons of canned apricots, peaches, and pears combined and 18,000 tons of canned mixtures are allowed in annually at a tariff equal to one half of the prevailing rate, which is generally about 20 percent. While the quota is fairly significant, it does not lead to the duty-free situation that other South African products will eventually enjoy. The agreement should have a beneficial effect on export returns, which are under stress due to a world oversupply situation. Domestically, production costs and inflation are also becoming major problems in an industry suffering from static prices.

Europe is the most important market for South African canned fruit. Between 60 and 66 percent of the exports traditionally go to Europe; this has become very important with the quota allocated under the EU/SA agreement. Initial indications are that the quota will cover between 70 and 80 percent of exports to Europe, but only 40 percent of total exports to all markets. The EU duty benefit of about 10 percent will therefore equate to about 4 percent on the total pack. Thus while helpful, the EU/SA agreement is not expected to provide any stimulus for increased production.

Under the terms of the African Growth and Opportunity Act the United States granted South Africa duty-free treatment for all canned fruit except canned apricots and canned peaches.

**Production Supply and Distribution (PS&D) tables for canned mixed fruit and canned apricots have been discontinued. In addition, several countries (France and Japan) have been eliminated from the PS&D tables for canned peaches and canned pears. This decision was necessitated due**

to the declining Foreign Agricultural Service budget resources and the need to more strategically target remaining resources in support of the Agency's primary mission to facilitate the expansion of export opportunities for U.S. produced agricultural commodities.

## **U.S. Greenhouse Tomato Industry Alleges Unfair Competition, Files Antidumping Action Against Imports From Canada**

**U.S. imports of fresh tomatoes from Canada have grown from 22,000 tons valued at \$37 million in CY 1996 to 101,390 tons valued at \$161 million in 2000. In recent years, there has been a continuous rise in Canadian exports of greenhouse (GH) tomatoes to the United States, mainly during the months of April to June, a peak season for U.S. producers. On March 28, 2001, U.S. GH producers filed an anti-dumping petition with the U.S. International Trade Commission (ITC) and the Department of Commerce against imports of GH tomatoes from Canada, alleging that Canadian GH tomatoes are being sold in the United States at less than fair value, and are materially injuring or threatening to injure U.S. GH producers. On May 10, the ITC ruled unanimously that there is a reasonable indication that a U.S. industry is materially injured by reason of imports of GH tomatoes from Canada that are allegedly sold at less than fair value. As a result of the ITC's affirmative determination, the Commerce Department will continue to conduct its investigation on the issue of dumping margins, with its preliminary determination due on or about September 4, 2001.**

### **Canadian Greenhouse Tomato Industry**

Production of GH tomatoes in Canada expanded rapidly throughout the 1990s, reflecting large, private capital outlays and increased demand for fresh tomatoes by North American customers. However, energy is now the primary component of the costs of producing GH tomatoes in Canada, making profitability of investment uncertain. The majority of Canada's GH tomato production is located in the provinces of Ontario (68 percent), British Columbia (23 percent), and Quebec (8 percent). Canada's tomato GH industry is well developed, with production growing from 32,900 tons in 1994 to 158,000 tons in 1999. Currently, about half of Canada's GH tomato production is exported to the United States. Because of cold weather, limited sunlight, and high energy costs during the winter months, shipments of Canadian GH tomatoes to the United States begin around March, peaking in May or June and ending around December.

In anticipation of a U.S. anti-dumping action against Canadian greenhouse tomatoes, Canadian producers issued a press release on February 12, labeling the U.S. industry's dumping allegations as being "completely without merit" Canadian officials suggested on several occasions that it is the U.S. industry that is dumping field-grown tomatoes in Canada; however, no action has been taken to date to initiate a formal review and investigation of this allegation.

## Increasing Imports of Canadian GH Tomatoes Triggers U.S. Anti-dumping Action

On March 28, 2001, EuroFresh, Sunblest Management, HydroAge, Village Farms, Sunblest Farms, and Carolina Hydroponic Growers, filed an anti-dumping petition against Canada, alleging that imports of GH tomatoes are being sold in the United States at less than fair value, and are materially injuring or threatening to injure U.S. GH tomato producers. U.S. imports of fresh tomatoes of all types from Canada have grown from 22,000 tons valued at \$37 million in CY 1996 to 101,390 tons valued at \$161 million in CY 2000. GH tomatoes continue to account for a rapidly increasing share of the U.S. fresh tomato market. In recent years, the U.S. GH tomato industry has been adversely affected by a stronger U.S. dollar vis-a-vis the Canadian dollar, which has contributed to the continuous growth of imports of GH tomatoes from Canada over the past twelve months. In 2000, GH tomato imports from Canada accounted for 48 percent of all types of fresh tomatoes imported, and 51 percent of total GH types. Canadian fresh tomato exports to the United States are predominantly high-value GH tomatoes while U.S. exports of fresh tomatoes to Canada are mainly field-grown tomatoes.

## U.S. Greenhouse Tomato Industry

According to the Economic Research Service (ERS), U.S. production of GH tomatoes in CY 2001 is estimated at 159,000 tons (350 million pounds), unchanged from the estimated level in CY 2000, and up 10 percent from 1999. Area under glass for this production volume is estimated at 324 hectares (800 acres). The leading GH tomato producing states are California, Arizona, Colorado, Minnesota, New York, Pennsylvania, New Mexico, Nevada, Texas and Virginia. Almost all U.S. GH hydroponic

tomatoes produced are sold at the retail level.

Compared with fresh-market field-grown tomatoes, GH hydroponic tomatoes are sold at higher prices in the marketplace, because consumers are willing to pay a higher premium for the product, due to perceptions relating to taste, color, size and presentation (fruit on-the-vine). But as U.S. production and import volumes increase (mainly from Canada), prices of greenhouse tomatoes are likely to drop. GH tomatoes are still a small part of the U.S. fresh tomato market. The unit price of GH tomatoes currently wholesale for nearly two to three times more than the price of field-grown tomatoes.

On the export side, Canada is the top market for total U.S. fresh tomatoes, accounting for 75 percent of the total value in 2000, down 9 percentage points from 1999. Florida, California, Arizona, Virginia and Texas are the leading states in exports of fresh tomatoes to Canada, accounting for about 90 percent of the total.

***For more information, contact Emanuel McNeil at (202) 720-2083.***

## **World Trade Situation and Policy Updates**

### **Initiation of Antidumping Duty Investigation on Spring Table Grapes from Mexico and Chile**

The U.S. Department of Commerce determined on May 9 that the early-season grape growers in California have standing as an industry entity, clearing the way for the dumping petition against Chile and Mexico, filed by the Desert Grape Growers League of California on March 30, to go forward. The next significant ruling on the grape case will be the ITC's preliminary decision on injury, scheduled for June 4. The period under review in the investigation is April-June. U.S. imports of table grapes from Mexico and Chile during this period in 2000 totaled 145,709 metric tons, with an associated value of \$183 million. The Commerce Department has indicated that the case is to proceed on the following timeline:

Petition Filed	March 30, 2001
DOC Initiation	May 9, 2001
ITC Preliminary Determination	June 4, 2001
DOC Preliminary Determination*	September 26, 2001
DOC Final Determination*	December 10, 2001 ITC
Final Determination	January 24, 2002
DOC Issues Orders (If warranted)	January 31, 2002

\* U.S. law allows these dates to be extended. If the DOC makes affirmative final determinations, the ITC must make final injury determinations within 45 days. If those determinations are affirmative, DOC will issue antidumping duty orders.

### **ITC Staff to Visit Europe to Review European Union (EU) Horticultural Sector Support Policies**

As part of the ITC ongoing 332 investigation of the EU's support policies for its horticultural sector, ITC staff will be conducting meetings in Europe beginning the week of May 14. The current itinerary calls for stops in Brussels, the Netherlands, Spain, France, Italy, and Greece. FAS offices in Europe are providing support and assistance to this effort. The ITC officials plan to meet with Commission and member state officials, as well as industry representatives, to gather detailed information on the composition and operation of the EU's complex regime. For 2001, the EU Commission has budgeted approximately \$1.5 billion in direct expenditures to support the fruit and vegetable sector, with additional assistance at the member state level serving to swell that number even larger. Following the visit, the ITC investigators will begin developing their final report, which is expected to be completed and submitted to USTR by November 2001.

## **The EU Modifies Fruit and Vegetable Regime**

Under pressure from the EU fruit and vegetable industry to simplify the associated support regime, the EU amended the market organization rules for processed tomatoes, processed peaches and pears, and citrus fruit, applicable as of marketing year 2001/02. Changes made to the regime relate to aid paid to Producer Organizations (applicable as of January 1, 2001) and the management of export refunds for fresh fruit and vegetables (applicable as of marketing year 2001/02). This is the first substantial modification to the EU fruit and vegetables regime since 1996. (Erik Hansen, 720-0875).

## **Mexico's 2001 Safeguard Quota Filled for Coffee Products from the United States**

On April 30, 2001, Mexico's Secretariat of Economy (SE) published in the "Diario Oficial" (Federal Register) an announcement that the quantity of coffee and coffee product imports from the United States exceeded the 246-ton NAFTA safeguard tariff-rate quota (TRQ) for 2001. Given that the safeguard quantity has been reached, the tariff on imports of these products from the United States was raised from 4 percent to 20-percent ad valorem on May 1, 2001. This directive will remain in effect through December 31, 2001. The commodity codes affected are: 2101.11.01, Instant Coffee not flavored; 2101.11.02, Extract of liquid coffee concentrate, frozen or non-frozen; 2101.11.99, Others; 2101.12.01, Preparations with a basis of extracts, essences or concentrates or with a basis of coffee.

## **U.S. Import Duties on Iranian Pistachios to Remain in Place**

The \$250 million U.S. pistachio industry has won another round in its ongoing struggle to keep out heavily subsidized pistachios from Iran. Iran, which petitioned the U.S. government to drop dumping duties on its pistachios, has withdrawn the petition, which means the duties will stay in place. These duties effectively block entry of Iranian pistachios. The Iranians did not reveal details of their subsidies, which was required if the petition was to be successful. U.S. pistachio officials say the Iranian subsidies cover both production and exports, and are believed to amount to more than the typical per-pound price of pistachios. Iran is the world's largest producer of pistachios, followed by the United States, with California accounting for virtually all production. The market is growing, but so is production. California produces about 241 million pounds, and exports around 60 percent worldwide.

## **U.S. and Canadian Officials Agree on Conditions for the Movement of Potatoes**

On April 26, U.S. and Canadian officials announced that an agreement had been reached to allow the movement of potatoes grown from Prince Edward Island (PEI), Canada under certain agree conditions. These conditions apply only to the 2000 PEI potato crop and are designed to mitigate the risk of spreading

the potato wart disease. Agriculture Minister Lyle Vanclief stated, "I am extremely pleased a deal has been worked out and that the issue is moving toward full resolution. This is great news for PEI potato producers." The Minister said he is encouraged by the development allowing movement of the 2000 potato crop and that the Government of Canada will continue to work with the U.S. on an agreement for the 2001 crop.

### **ITC Issues Affirmative Preliminary Injury Ruling in Canada Hothouse Tomato Dumping Case**

The United States International Trade Commission (ITC) ruled unanimously on May 10 that there is a reasonable indication that a U.S. industry is materially injured by reason of imports of greenhouse tomatoes from Canada that are allegedly sold in the United States at less than fair value. All six Commissioners voted in the affirmative. As a result of the ITC's affirmative determination, the U.S. Department of Commerce will continue to conduct its investigation on the issue of dumping margins, with its preliminary determination due on or about September 4, 2001. An anti-dumping petition against Canadian hothouse tomatoes was filed with the ITC and Commerce Department on March 28 on behalf of Eurofresh, Inc.; Sun Blest Management; Hydro Age; Village Farms, LP; Sun Blest Farms; and Carolina Hydroponic Growers, Inc.. According to Census Bureau data, U.S. imports of Canadian hothouse tomatoes in CY2000 totaled 76,684 metric tons (MT), with an associated value of \$122 million. Hothouse tomatoes now account for roughly half of the total volume of Canadian tomato shipments to United States, and this share has been rising sharply. U.S. tomato exports (essentially all field grown) to Canada in 2000 totaled 144,950 metric tons (\$121 million), up from the previous year's total of 137,445 MT (\$104 million).

### **Prague Wine Promotion**

FAS Prague and Vienna recently organized a dinner at the DCM's residence promoting U.S. beef and wine for the general managers of Prague's major hotels, the President of the Hotel and Restaurant Association, and the commercial directors of the rapidly expanding hyperstore chains. All participants had previously considered adding, or expanding, these products to their menus, or for sales. Without prompting, during general conversation at the table, everyone commented on the quality, unique taste and flavor of the U.S. products and that the Czech consumers with increased disposable income were more willing to spend more money for an improved consumption item. More importantly, everyone stated that they would expand these products on their menus or provide additional shelf space. Post will follow up with in-store promotions and restaurant promotions.

### **Italy Begins Implementing \$60 million Citrus Plan**

According to the U.S. Agricultural Counselor's office, after waiting two years to get approval from the EU Commission, Italy recently began implementing the Citrus Plan it had proposed in 1999. The plan will

reportedly provide \$60 million in national aid to the citrus sector, with \$25 million being used for a variety-renovation program and \$35 million being used for structural enhancement, market organization and promotional programs. In addition, the government of Italy has spent \$15 million to buy and process 61,000 tons of oranges, lemons and tangerines to be delivered to developing countries under a humanitarian aid program. The Sicilian Regional Authority will be using \$12 million of its funds to buy and process 55,000 tons of citrus fruit during 2001. According to the Agricultural Counselor, the juice will also be used for humanitarian aid, but the program is also seen as a means of support to the Sicilian citrus sector.

### **Prospects for Increased Demand for Processed Food in Latvia**

Products are viewed as favorable, in line with growing tourism and increasing purchase power of Latvia's population. Only the higher income segments of about one million active buyers are regular consumers of high-value food imports. So far, several constraints have contributed to the small market presence of American products. American exporters must be more aggressive as European countries have already established distribution networks and consumers are more familiar with grocery products of Scandinavian and German origin. The fast developing consolidation of retail outlets through investment by large Scandinavian chains may provide new opportunities for exporters who can successfully connect with these companies.

### **United States Department of Agriculture (USDA) Issues Proposed Volume Regulation to Assist Cranberry Industry**

The USDA announced a proposed rule that could result in a regulation to limit the volume of cranberries marketed during the 2001-02 crop year. The proposed rule offers the industry three options. The industry's Cranberry Marketing Committee is recommending a marketable quantity of 4.7 million barrels and a producer allotment of about 67 percent for the new season beginning September 1. The allotment establishes the quantity of cranberries that handlers may purchase from, or handle for growers. Fresh and organically-grown cranberries would be exempt from the regulation. The committee's proposal is intended to stabilize plummeting prices due to expanding production and mounting inventories. A group of cranberry growers, concerned that the committee's recommendation would not result in a sufficient increase in grower prices, has submitted an alternative proposal: to set the marketable quantity at 4.0 million barrels, and fix the allotment at about 54 percent, with no exemption for fresh and organically grown fruit. USDA's Agricultural Marketing Service, which oversees the cranberry marketing order, is including in the proposed rule a third option: to establish no limits on this year's crop and let cranberry growers and handlers voluntarily and individually decide how much fruit to market. The proposed rule can be viewed at: [www.ams.usda.gov/fv/moab.html](http://www.ams.usda.gov/fv/moab.html).

## **USDA Extends Potato Diversion Deadline**

The USDA is extending the public comment period for its proposed rule to assist farmers with a potato diversion program. USDA's Agricultural Marketing Service is extending the proposed rule's original May 13 deadline to June 12, and changing the time frame to submit the claim for reimbursement for the diversion from May 14-June 13 to June 13-July 13. Written comments must be received on or before June 12. Comments may be sent to: Susan Proden, Commodity Procurement Branch Chief, AMS Fruit and Vegetable Programs, USDA Stop 0239, 1400 Independence Ave. SW, Washington, D.C. 20250-0239; fax: (202) 720-2782; or via the program's Web site at: [www.ams.usda.gov/fv/fvcomm.htm](http://www.ams.usda.gov/fv/fvcomm.htm).

## **USDA Launches On-Line Manual of Permitted Fruits and Vegetables**

The USDA is establishing a new manual on its website that lists all of the fruits and vegetables from every country in the world that may be imported into the United States. The manual, which includes fresh herbs and sprouts, can also be used to determine what permits are required for importation. Anything that is not included on the list is prohibited from entering the United States. This manual will meet the needs of importers from around the world who want to expand their markets to the United States but are unsure of what fruits and vegetables are permitted. The database will also benefit USDA's Animal and Plant Health Inspection Service, which has agricultural inspectors at international ports of entry around the country. APHIS' inspectors can use the on-line manual, which contains pictorial identification guides, to more quickly determine if cargo and other produce brought to the United States by importers and passengers is allowed entry or must be confiscated. To view the complete list visit: [www.aphis.usda.gov/ppq/manuals](http://www.aphis.usda.gov/ppq/manuals).

## **Export News and Opportunities**

Are you interested in exporting but hesitating because you are concerned about getting paid? If so, do not overlook the billions of dollars the U.S. Department of Agriculture (USDA) makes available to help facilitate sales to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without credit guarantees. Invest the time to learn more about the Export Credit Guarantee Program (GSM-102) and Supplier Credit Guarantee Program (SCGP) to increase your sales and lower your risks. Use GSM and SCGP to avoid possible importer and foreign bank defaults on payments and ensure that American farm and food products continue to move to markets around the world. USDA does not provide financing, but it guarantees payments due to U.S. exporters in case the foreign banks or importers default.

You may learn more about GSM-102 and SCGP regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity on the Internet at:

**<http://www.fas.usda.gov/export.html>**

### **GSM-102**

The GSM-102 program makes available credit guarantees for sales of U.S. agricultural commodities overseas. USDA does not provide financing, but guarantees payments due from foreign banks. USDA typically guarantees 98 percent of the principal and a portion of the interest. The GSM-102 program covers credit terms from 90 days to 3 years.

Under the program, once a firm sale exists, the qualified U.S. exporter applies for a payment guarantee before the date of export. The U.S. exporter pays a fee calculated on the dollar amount guaranteed, based on a schedule of rates applicable to different lengths of credit periods. The Commodity Credit Corporation (CCC)-approved foreign bank issues a dollar-denominated, irrevocable letter of credit in favor of the U.S. exporter, ordinarily advised or confirmed by the financial institution in the United States agreeing to extend credit to the foreign bank. The U.S. exporter may negotiate an arrangement to be paid as exports occur by assigning the U.S. financial institution the right to proceeds that may become payable under the guarantee, and later presenting required documents to that financial institution. Such documents normally include a copy of the export report. If a foreign bank fails to make any payment as agreed, the exporter or the assignee may file a claim with USDA for the amount due and covered by the guarantee. USDA will pay the U.S. bank and will take on the responsibility of collecting the overdue amount from the foreign bank.

## **Supplier Credit Guarantee Program**

On May 8, USDA amended the Commodity Credit Corporation's Supplier Credit Guarantee Program (SCGP) for the Central America Region for fiscal year 2001. This amendment increases the program allocation from \$15 million to \$30 million. The Central America Region includes Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, and Panama. All other terms and conditions as previously announced remain the same. The previous FAS announcement pertinent to this allocation is PR 0386-00.

The SCGP is unique because it covers short-term financing extended directly by U.S. exporters to foreign buyers and requires that the importers sign a promissory note in case of default on the CCC-backed payment guarantee. The SCGP emphasizes high-value and value-added products, but may include commodities or products that also have been programmed under the GSM-102 program.

The SCGP encourages exports to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without CCC guarantees. Under the SCGP, CCC guarantees a portion of payments due from importers under short-term financing (up to 180 days) that exporters have extended directly to the importers for the purchase of U.S. agricultural commodities and products. These direct credits must be secured by promissory notes signed by the importers. CCC does not provide financing but guarantees payment due from the importer.

## **GSM-102 and SCGP**

The following tables present the FY 2001 GSM-102 and SCCP for which USDA has allocated credit guarantees for sales of U.S. horticultural products. The table also includes horticultural sales (exporter applications received) that have been registered under GSM-102 and SCGP. For most countries and regions, exporters may apply for credit guarantees on a first-come-first-served basis to cover sales of any of the eligible commodities published in FAS program announcement PR 0096-01, issued March 20, 2001 or as superseded. The following horticultural products are eligible under the export credit guarantee programs: dried fruit; fresh fruit; frozen fruit; canned fruit; 100-percent fruit juices; fruit and vegetable concentrates, pastes, pulps and purees; honey; hops or hops extract; beer; tree nuts; fresh vegetables; canned vegetables; dried vegetables; wine; and brandy. The General Sales Manager will consider requests to establish an SCGP and/or GSM Program for a country or region or amend an authorized program to include horticultural commodities and products that are currently not eligible.

*(For further information on the SCGP or GSM-102 Program for horticultural commodities, contact Yvette Wedderburn Bomersheim on 202-720-0911 or Rochelle Foster on 202-720-2936).*
